detection

Skopos analyzes cyber security risks of your employees, technology & processes on a daily basis

monthly
advice

Every month we send you advice with actions for your teams

all year round
in control

You are clearly in control of cyber risks all year round

1.A short introduction

"It takes twenty years to build a reputation, but only five minutes to ruin it. When you know that, you do things differently" - Warren Buffett.

You are proud of your organization and your reputation. Unfortunately, it's a fact that cyber incidents can have major financial consequences and can lead to reputational damage. What will you do? Can you prevent it? Do you know whether your employees know how to respond adequately to a ransomware attack? And do you want to know whether data from your organization has been exposed to criminals?

The chance of a cyber attack for your organization is real. The number of malware attacks is increasing, especially in the form of ransomware. Further digitization within organizations and new ways of working present new challenges for cyber security. The next batch of shocking hacks is only a matter of time. How is that possible?

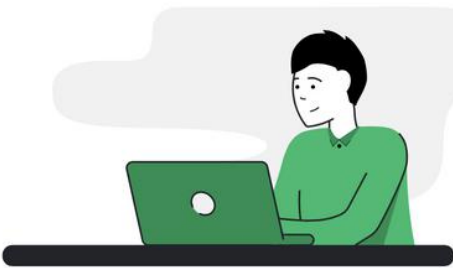

With Skopos you are continuously in control of your cyber risks. We map out 24x7 how secure every workplace, website and server is. And we measure how aware your employees are of cyber security risks by means of a comprehensive analysis of your digital organization.

It's a fact - cyber criminals can disrupts your business and damage your reputation

2. Skopos complete vision on cybersecurity

Skopos offers a holistic approach to cybersecurity for your entire business because we know there are so many risks to consider. Only when you are aware of your cyber security risks can you take measures.

Being compliant in cyber security is not enough, you want to be demonstrably in control of your cyber security risk. That is why there is the Skopos Cyber Audit. Via a dashboard you follow 24x7, 365 days a year, how your company is doing. Skopos automatically maps your risky software and immediately links this to the cyber awareness of your employees. The three pillars of the Skopos Cyber Audit are: processes, technology and employees.

Want to get started? After with one of our Skopos employees you will have a good idea of where you stand, what your risks are and what you can do within a day. Because prevention is better than cure.

Processes

Skopos supports in the information security process. We identify what sensitivities are, support and advise in making decisions and checking whether sensitivities have actually been resolved.

Based on the concept of 'people-centred security', we look for the weakest link within an organization and report this to the organization. We measure the cyber awareness of employees.

Technology

We perform a comprehensive analysis of workstations and servers. With this information, you can see how likely a ransomware attack is or how easily an attacker can take over a system. You get a list of all vulnerabilities.

We scan your website(s) for available services, open ports and software versions. This gives a good idea of how attractive the website is to attackers. We give advice on measures to be taken.

Employees

We search the public and dark web for information about your organization. You can see exactly where, when and which data has been leaked in a data breach.

We test your employees at an unexpected moment by means of a phishing campaign. We use cyber questionnaires to ensure that our cyber awareness training is tailor-made for your team. We train password and privacy awareness.

1 in 5* companies fall victim to cybercrime

Antivirus software is most commonly used

Encryption is the least used form of cyber protection

Nearly half of attacks lead to costs

3. The Skopos Cyber Audit

Powerful tool

There are many fragmented solutions: a piece of anti-virus, a firewall, phishing prevention. That fragmentation is unclear and inconvenient. To prevent instead of cure, we have developed our unique Skopos Cyber Audit. A complete audit with a holistic approach, which can be followed live 24x7 via the Skopos Dashboard. Through this powerful dashboard you can compare your company with other Skopos customers. Via the trend graph you can see how you can improve the security scores.

Simple advice

A good IT infrastructure is important for a successful and holistic approach to cybersecurity. The Skopos Cyber Audit detects vulnerabilities and leaks. Subsequently, our customers receive weekly and monthly advice on strengthening security. For example, we recommend removing dangerous software, updating systems or installing new programs such as a virus scanner.

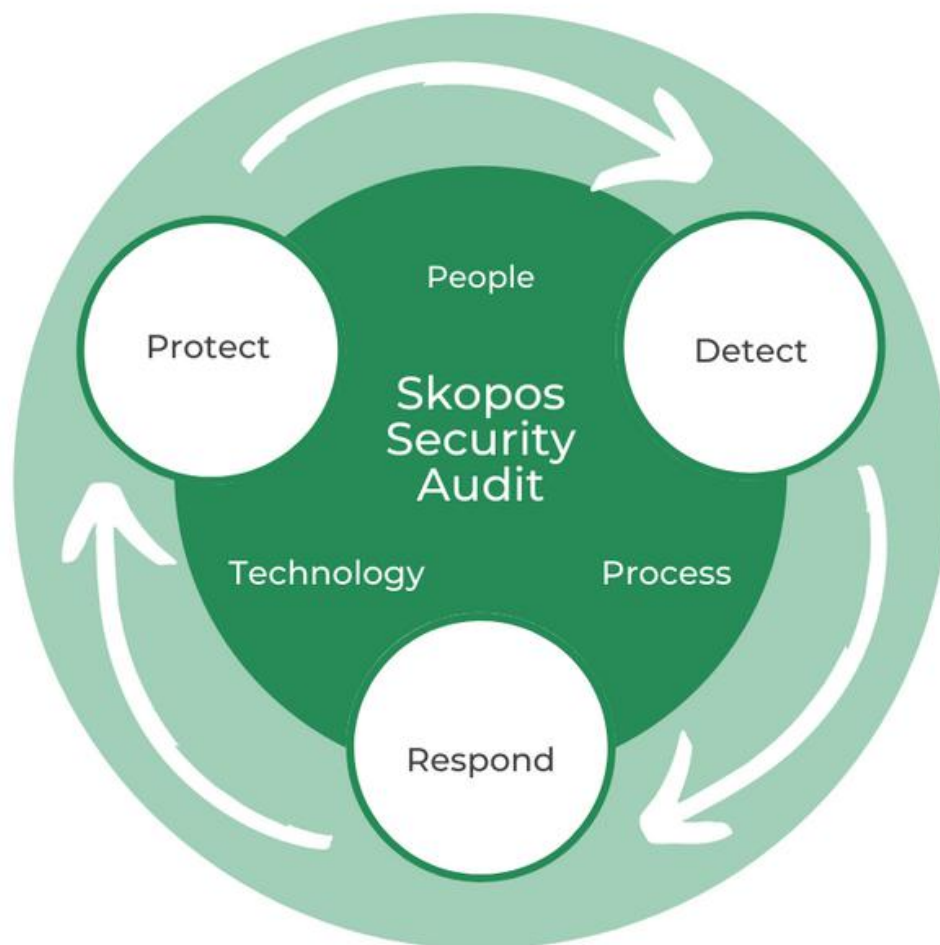

Continuous cyber auditing

Skopos offers continuous auditing and provides real-time statistics about the security of your organization. Some organizations use pen testing, but pen testing only displays a snapshot. Every day there are new vulnerabilities and leaks. You want to be cyber secure all year round. Pentests can extensively test web applications or servers, but they don't scan employees, laptops, or BYOD, and they don't do patch management. They are not suitable for holistic and continuous mapping of the risks for an organization.

PENETRATION TEST	SKOPOS CYBER AUDIT
 Snapshot	 365 days per year
 One moment in time	 Available all year round
 High costs	 Save money through automation

The Skopos Cyber Audit is designed from the principles of Zero Trust, making organizations less susceptible to external attacks and threats from within. We check for network segmentation, secure user authentication and access control, and threat prevention. This allows us to quickly detect and respond to abuse.

The Skopos Cyber Audit

The Skopos Cyber Audit is designed to protect digital environments. Based on the principle of 'never trust, always verify', we check your organization for employees, processes and technology. This allows us to quickly detect abuse and recommend the implementation of new facilities.

4. What our customers say

“

"Thanks to Skopos we became much more aware of risks "
Hans Quist, CISO
Provincie Zeeland

”

“

"We were safer within ten days"
Marc Paus, CISO Mobile
World Congress,
Barcelona

”

“

'Quick results, we are in control of security'
- Jelle Witteveen,
technical director
Motivo, Zwolle

”

“

From the CEO

"For us, innovation means that you can solve a problem with a lot of creativity and that it has real value. Criminals are working on new attacks and new techniques every day. That is why it is important to innovate, so that you are one step ahead of the criminals and you can keep your organization safe."

Han Veldwijk
CEO Skopos

From the Cyber Awareness Trainer

"Every cyber security strategy stands or falls with people. People must be able to do their job well and receive support to acquire the knowledge and skills they need. This way your organization is safe and effective, and employees feel valued."

Willemijn van de Lagemaat
Cyber Awareness Training

”

5. About Skopos

We have been helping people and organizations to be digitally safer from an early age. We are a team with a passion for information security.
